Luna Chat User Guide

Everything you need to set up your AI chat assistant, train your team and go live — from your first login to your first happy customer.

For travel businesses

Set-up · daily use · going live

Audience: site admins & chat agents

What's inside

1 Welcome — what Luna Chat does

The three parts you'll use, and what Luna can do

2 Designing your chat

Brand, colours and welcome message, with a live preview

3 Luna Brain — keeping your AI accurate

Fix gaps, approve answers and verify knowledge in one click

4 The Agent Dashboard — daily use

Sign in, presence, conversations, take over, reply

5 Luna Copilot — your agents' AI assistant

Suggested replies, rewrites and thread summaries

6 Sharing files and images

Send documents and photos both ways in chat

7 WhatsApp in the same inbox

One place for web chat and WhatsApp

8 Ratings, receipts, transcripts & translation

The finishing touches that delight customers

9 Your go-live checklist

Everything to tick off before you switch on

1 Welcome — what Luna Chat does

Luna Chat is a complete live-chat system for travel businesses. It gives your website an AI assistant that answers visitors instantly, day and night, grounded in your own knowledge — and hands over to your team the moment a real person is needed.

The three parts you'll use

- 1 **The chat bubble** — what visitors see on your website. You design how it looks and behaves on the [Widget Setup](#) page (Section 2).
- 2 **Luna (the AI)** — answers visitors from your approved knowledge. She never invents prices, availability, dates or ATOL/ABTA detail; if she isn't sure she offers to confirm, or hands over. You keep her sharp in [Luna Brain](#) (Section 3).
- 3 **The Agent Dashboard** — where your team watches live chats, takes over and replies (Section 4), with [Luna Copilot](#) helping them write better replies faster (Section 5).

What Luna does for visitors and agents

- Answers questions instantly from your knowledge — in the visitor's own language, translated both ways.
- Hands over to a human when the visitor taps [Talk to a human](#), or when Luna decides it's needed.
- Lets visitors [Leave a message](#) when no one is available.
- Shares files and images in chat, both directions (Section 6).
- Brings [WhatsApp](#) into the same inbox so your team answers everything in one place (Section 7).
- Emails the visitor a copy of the chat, collects a star rating and shows read receipts (Section 8).

LUNA IN ACTION

Luna answers a family holiday enquiry on the right; your team sees the same conversation live in the dashboard on the left.

Tip. Think of Luna as your tireless first responder. She handles the routine 24/7, so your people spend their time only on the conversations that genuinely need a human touch.

Good to know — the clever bits are already done for you. The AI brain, security, photo and document sharing, WhatsApp and translation are all built in and switched on by the Travelgenix team. There's nothing technical for you to install or manage — this guide simply shows you how to use Luna.

2 Designing your chat

You decide how your chat looks and sounds in the **Widget Setup** page — a simple, click-through set of steps with a **live preview** beside it that updates as you go. No design skills needed. The steps are **Brand**, **Theme**, **Behaviour** and **Size** (the last two, **Connect** and **Go live**, are usually handled for you — see the end of this section).

Move through with the **Next** button and **Back** if you want to change something.

Tip. Keep an eye on the live preview while you work — every change shows up there at once, so you never have to guess how it will look.

Step 1 — Brand

"Set up how Luna appears on your website."

The screenshot shows the 'Widget Setup' page for 'LUNA LIVE CHAT'. The page has a header with the title 'Widget Setup' and a subtitle 'Configure, preview and deploy your AI chat widget'. Below the header is a progress bar with six steps: 1 Brand (active), 2 Theme, 3 Behaviour, 4 Size, 5 Connect, and 6 Deploy. The main content area is divided into two sections. The left section, titled 'Brand Identity', contains a form with the following fields: 'BOT DISPLAY NAME' (Luna AI), 'TAGLINE' (AI ASSISTANT), 'LOGO LETTER' (L), 'YOUR COMPANY NAME' (Sunshine Travel), and 'FOOTER TEXT' (Powered by Luna AI). A 'Next: Theme' button is at the bottom right of this section. The right section, titled 'LIVE PREVIEW', shows a mobile app interface for 'Luna AI AI ASSISTANT'. The app interface includes a greeting, a list of suggested questions (e.g., 'How much does it cost?', 'What do I get with Ignite...'), a text input field with a 'Talk to a human' button, and a 'Leave a message' button. The app interface also shows a response from the assistant: 'We have three packages: Spark at £159/mo...'. A 'Powered by Luna AI' logo is at the bottom of the app interface.

STEP 1 Brand Identity, with the Live Preview on the right.

Field	Default	What it does
Bot Display Name	Luna AI	The name shown at the top of the chat (e.g. "Sunshine Travel Assistant").
Tagline	AI ASSISTANT	The small line under the name.
Logo Letter	L (max 2)	The letter(s) in the round logo badge.
Your Company Name	e.g. Sunshine Travel	Your business name. This identifies your account, so fill it in.
Footer Text	Powered by Luna AI	The small line at the very bottom of the chat window.

Tip. Keep the **Bot Display Name** friendly and on-brand — visitors talk to it by name.

Step 2 — Theme

"Choose a preset theme. Colours apply instantly to the preview." Pick one of six presets — **Dark**, **Light**, **Ocean**, **Emerald**, **Sunset**, **Rose** (default **Dark**).

Talk to a human

Leave a message

Powered by Luna AI

STEP 3 Welcome message, prompt hints, name prompt and button labels.

Field	What it does
Welcome Message	The first thing visitors see. Default: <i>"Hey there! I'm Luna, your AI assistant. How can I help you today?"</i>
Prompt Hints (one per line)	The tappable suggested questions visitors see. Up to four appear.
Ask for visitor's name	An on/off switch (on by default) — whether Luna asks the name before starting.
Name Prompt	The wording used to ask. Default: <i>"Before we start, what's your name?"</i>
Escalation Button Text	The button to reach your team. Default: Talk to a human
Leave Message Button Text	For when no one is available. Default: Leave a message

Tip. Write **Prompt Hints** as the real questions your customers ask — they double as a menu and gently steer the conversation. e.g. "Best Greek islands for families", "All-inclusive under £800", "Do you do the Maldives?"

Step 4 — Size

"Choose the chat window size. On mobile it always goes full screen."

STEP 4 Compact (340×520), Standard (380×600, default) or Large (420×680).

Tip. **Standard** suits most sites. Pick **Large** only if you expect long, detailed conversations. On phones the chat always fills the screen.

Steps 5 & 6 — Connecting Luna to your website

The last two steps, **Connect** and **Go live**, are the only slightly technical part — and the good news is **your Travelgenix account manager normally does these for you**. In most cases your chat is already connected and live on your website by the time you're reading this, so there's nothing here you have to do.

DONE FOR YOU The final step produces a small piece of website code. Your account manager handles this — you don't need to understand it.

If you ever want to add the chat to a new website yourself

- 1 Copy the code shown on the final step (press **Copy**).
- 2 Send it to whoever looks after your website, with a note: *"Please add this to our site so our live chat appears."*
- 3 That's it — it works with all the usual website builders (WordPress, Wix, Shopify, Duda and more).

Tip. Not sure who looks after your website? Your Travelgenix account manager is happy to add the chat for you — just ask.

Tip. Once it's on, open your website in a new tab and look for the little chat bubble in the corner. Say "hello" to see Luna reply — that's your proof it's working.

3 Luna Brain — keeping your AI accurate

Luna Brain is where you keep Luna's knowledge accurate — *"The things your AI couldn't quite handle — fix them in one click."* Most fixes here really are one click. The summary cards at the top cover the last 7 days: Conversations, Avg quality, Answer rate, Open gaps, Suggested and Review due.

Low-quality conversations 0

Where Luna's answer scored 1 or 2 out of 5. Review and decide what to do.

Review due 2

Answers that have gone a while without a check. Confirm each is still accurate, then mark it verified to reset the clock. This never changes what Luna says, it just keeps your knowledge honest.

"Do you offer ATOL protection?"

Last verified 94 days ago

Overdue

Mark verified

Top knowledge items 0

The items Luna uses most. Edit any answer inline.

3.1 Knowledge gaps

Questions visitors asked that Luna couldn't answer confidently. Each card shows the question, topic, how often it was asked, and a **suggested answer from Luna**.

- **Approve & add** — accepts Luna's suggested answer as-is and adds it to her knowledge.
- **Edit first** — open the answer, correct it, then **Save & approve**.
- **Dismiss** — removes the gap (you'll confirm first).

Tip. Gaps are gold — the real questions your customers asked. Clear them weekly and Luna gets noticeably smarter. Always read the suggested answer first; where a price or policy is involved, use **Edit first** and put in the exact wording.

3.2 Suggested by Luna

Fresh things-to-do that Luna drafted from your own sources. Press **Approve** to make it live, or **Dismiss** to discard.

Tip. These are a fast way to build up Luna's knowledge — but always sanity-check each one before approving. You're the final word on what's accurate.

3.3 Low-quality conversations

Where Luna's answer scored 1 or 2 out of 5. Each card shows the score, topic, the reason, what was missing, and an expandable transcript.

Tip. Skim this weekly — a cluster of low scores on one topic usually points to a single missing piece of knowledge you can fix for good.

3.4 Review due

Answers that have gone a while without a check. Press **Mark verified** to reset the clock.

Note. Marking verified *never* changes Luna's answer — it just records that you've checked it's still true. Do a pass through "Review due" monthly, especially before peak booking season, so seasonal prices and offers stay current.

3.5 Top knowledge items

The answers Luna uses most, with Question, Type, Confidence, Last used and Uses. Click the pencil to edit any answer inline; set **Status** to **Active**, **Draft** or **Archived**, then **Save changes**.

Tip. Set **Status** to **Archived** to retire an answer Luna should no longer give (e.g. a discontinued package) without deleting your history.

What good knowledge looks like

- One clear question per entry, written the way a customer would ask it.
- A short, factual answer — exact figures, dates and terms where relevant.
- No guesses: if a detail can change (price, availability), keep it current or word it so it stays true.

4 The Agent Dashboard — daily use

The dashboard, titled **Luna Live Chat**, is where your team works each day — watching live chats, taking over when needed and replying.

The screenshot shows the 'Luna Live Chat' dashboard. At the top, there's a header bar with 'DASHBOARD | Luna Live Chat', a status 'Connecting...', and various utility icons like a bell, a speech bubble, and a globe. On the right of the header, it shows '0 agents' and a dropdown for 'Anna Sharma' with an 'Online' status. The main area is divided into three columns. The left column, 'CONVERSATIONS', lists three active chats: 'Sarah M.' (Tenerife sounds great — what's included? LUNA HANDLING), 'James W. · WhatsApp' (Can I change my flight dates? YOU), and 'Priya K.' (Looking for an all-inclusive in Crete... LUNA HANDLING). The center column shows the live chat thread for 'Sarah M.', with messages from 'SARAH M.' and 'YOU - ANNA'. The right column contains 'INTEL' (Agent details for Sarah M.), 'SESSION' (Current page, device, returning visitor), and 'DETAILS & REPLIES' (Quick replies like 'Warm greeting' and 'Hold a quote'). At the bottom, there's a 'DASHBOARD' tab and a 'Copilot' bar with buttons for 'Suggest replies', 'Improve', 'Friendlier', 'Shorter', 'More detail', and 'Summarise'.

DASHBOARD Conversations (left), the live thread with **Take Over / Resolve / Block** (centre), and the visitor info & Quick Replies panel (right). The Copilot bar sits just above the reply box.

4.1 Signing in

Your team opens the dashboard with their normal Travelgenix login — no extra password to remember. If someone helps more than one business, they'll be asked to pick which one. To leave, use **Sign out**.

Tip. Bookmark the dashboard. Because it signs you in automatically, your agents can be answering chats within seconds.

4.2 Presence — Online / Away / Busy

Each agent sets their status in the top bar: **Online** (green), **Away** (amber) or **Busy** (red). Everyone signed in appears under **Agents Online**.

Tip. Set yourself to **Away** when you step off the desk so colleagues know who can actually pick up.

4.3 The Conversations list

The left sidebar has two tabs — **Live** (current chats, with a count) and **History** (resolved chats). Search with "Search conversations...". Each row shows the visitor's name, time, a preview and a **handler chip**:

Luna AI — the AI is handling it

Agent — a human has it

Waiting — escalated, needs a human

WhatsApp chats carry a green **WhatsApp** badge (Section 7).

Tip. Sort your attention by the chips — **Waiting** (amber) means a customer is asking for a person *right now*; make that your first stop.

4.4 Reading a conversation

Open a chat to see the full thread. Messages are labelled by sender — **Luna** for the AI, the agent's name for human replies, and the visitor's own messages. A bouncing three-dot indicator shows when the visitor is typing. Non-English messages show a small language pill and are auto-translated both ways.

Tip. Scroll up before you reply — Luna may already have answered most of the question. Pick up where she left off rather than starting again.

4.5 Agent actions

- **Take Over** — you take control; Luna steps back and stops auto-replying.
- **Resolve** — closes the conversation and moves it to History.
- **Block** — blocks the visitor ("*They won't be able to start new conversations.*").

Tip. Use **Take Over** the moment a chat needs human judgement — a complaint, a complex itinerary, a booking change. Press **Resolve** when it's genuinely closed to keep your Live list clean.

4.6 Sending a reply

Type in the box ("Type your reply... (Shift+Enter for new line)") and press **Send**. Above the box are the **Quick Replies** and **Attach** buttons.

Tip. **Enter** sends; **Shift + Enter** starts a new line — handy for longer, structured replies.

4.7 Quick Replies

Open **Quick Replies** on the toolbar or in the side panel, and filter with "Filter replies...". Categories are **Greetings**, **Support**, **Sales** and **Closing**. Add one with **+ Add new reply** (Category, Title, Message, Emoji). Click a saved reply to drop it into the message box.

Tip. Build quick replies for your top ten repeat answers (deposit terms, opening hours, "we'll get back within the hour"). It turns a 30-second reply into a one-click one — and keeps wording consistent across the team.

4.8 The info panel — Intel / Session / Details

The right-hand panel has three tabs: **Intel**, **Session** and **Details & Replies**. Under **Visitor Details** you'll see name and email (with a green **RETURNING** badge for repeat visitors), current page, country, device, duration, message counts, handler, language and any rating.

Tip. Check the **Intel** panel before you reply — knowing the visitor's country, page and what they've already asked lets you answer in one go instead of asking things they've already told you.

4.9 Returning visitors

For repeat visitors the panel shows a **Previous Conversations** list (date, message count, a short preview). Luna recognises returning visitors automatically — only a name, last-seen, a count and a short topic summary are surfaced, never full past transcripts.

Tip. A **RETURNING** badge is a relationship cue. A quick "welcome back" and a glance at last time's topic makes the customer feel known and speeds the booking along.

5 Luna Copilot — your agents' AI assistant

Luna Copilot is a private assistant built into the dashboard, just above the reply box (labelled **Copilot**). It helps agents write better replies faster. **Customers never see it** — its output only ever goes to the agent, who decides whether to use it.

The screenshot shows the 'Luna Live Chat' dashboard. On the left, there's a 'CONVERSATIONS' sidebar with a 'Live' tab (3) and a 'History' tab (48). Below this is a search bar and a list of conversations. The main chat area shows a conversation with 'Sarah M.' (profile icon 'S', /holidays/tenerife, 4 min). The chat history shows Sarah M. asking about Tenerife, followed by Luna providing suggestions for late October travel. A 'YOU - ANNA' bubble is visible at the bottom of the chat history. Below the chat history is a 'COPILOT' bar with buttons: 'Suggest replies', 'Improve', 'Friendlier', 'Shorter', 'More detail', and 'Summarise'. The 'Suggest replies' button is highlighted. Below the Copilot bar is a text input field for the agent's reply, with a 'Send' button. On the right side of the dashboard, there's a sidebar with 'INTEL', 'SESSION', and 'DETAILS & REPLIES' tabs. The 'INTEL' tab is active, showing 'AGENTS ONLINE' (Anna Sharma (you), Tom Reilly), 'VISITOR DETAILS' (Name: Sarah M., Email: sarah.m@email.com, Location: Manchester, UK, Current page: /holidays/tenerife, Device: iPhone - Safari, Returning visitor: Yes (3rd visit)), and 'QUICK REPLIES' (Warm greeting, Hold a quote).

COPILOT The Copilot bar — **Suggest replies**, **Improve**, **Friendlier**, **Shorter**, **More detail** and **Summarise** — sits directly above the reply box.

Button	What it does
Suggest replies	Offers three ready-to-send options, each tagged <i>"From your knowledge"</i> , <i>"From the chat"</i> or <i>"Suggested"</i> . Click a card to insert it.
Improve	Rewrites your draft for clarity and warmth.
Friendlier	Makes the draft warmer and more personable.
Shorter	Tightens the draft.
More detail	Adds helpful, grounded detail.
Summarise	A short thread summary for handover — who the visitor is, what they want, what's unknown, the best next step.

After a rewrite you can **Replace draft** (with **Undo**) or **Copy** . Shortcuts: **Ctrl/Cmd + J** suggests replies; **Esc** clears the panel.

Like Luna herself, Copilot is grounded only in your approved knowledge and the live chat. It never invents prices, availability, dates or ATOL/ABTA detail — instead it leaves a clear bracketed gap such as **[check price]** or **[confirm dates]** for the agent to fill in.

Tip. Start with **Suggest replies**, then tweak with **Friendlier** or **Shorter** to match your style. Use **Summarise** before handing a chat to a colleague — it writes the handover note for you.

Always check. Read Copilot's draft before sending and fill in any **[bracketed]** gaps with the real figures. Those blanks are deliberate so a number is never guessed.

6

Sharing files and images

Both your visitors and your agents can share images and documents right inside a chat. Pictures show as small previews (click to enlarge); other files show as a simple download button.

To attach as an agent, use the **Attach** button on the compose toolbar, choose your file, then send. Supported types: JPEG, PNG, GIF, WebP, PDF, DOC/DOCX, XLS/XLSX, CSV and TXT, up to 4 MB (large photos are shrunk automatically).

Tip. File sharing is for the human part of a conversation. Luna doesn't read the contents of uploaded files — so when a customer sends a booking confirmation or passport photo, that's the moment to **Take Over** and handle it personally.

The one-time storage set-up is done by the Travelgenix team. Once it's on, attaching works straight away for both your agents and your visitors. (On WhatsApp, an attached file is sent to the customer as a link.)

7 WhatsApp in the same inbox

If your business connects a WhatsApp number, those conversations appear in the **same dashboard** as your web chats — no separate app. A customer messages your number, the chat appears live with a green **WhatsApp** badge, Luna answers as usual, and your agents reply from the dashboard. Replies are delivered back over WhatsApp automatically.

The screenshot shows the 'Luna Live Chat' dashboard. On the left, a 'CONVERSATIONS' sidebar lists three chats: 'Sarah M.' (now), 'James W. · WhatsApp' (2m), and 'Priya K.' (8m). The main area displays the active chat with Sarah M., who asks for holiday recommendations in late October. Luna provides suggestions for Costa Adeje, Paphos, and Marrakech. A blue bubble from 'YOU - ANNA' responds with a travel team offer. The right sidebar shows agent details for Anna Sharma and quick reply options like 'Warm greeting' and 'Hold a quote'. At the bottom, a dark blue 'OMNICHANNEL' banner states: 'A WhatsApp chat (see "James W. · WhatsApp" in the list) sits right alongside your web chats.'

Work a WhatsApp chat exactly like a web chat: read the thread, **Take Over**, reply, then **Resolve**. Escalation works too — a WhatsApp chat that needs a person flips to **Waiting** and Luna stops.

Tip. One inbox for everything means your team has a single place to watch. Treat a **WhatsApp**-badged chat exactly like any other.

The 24-hour rule. WhatsApp only lets you reply freely within 24 hours of the customer's last message. If a customer goes quiet for more than a day you may not be able to send a free-form follow-up — so reply promptly while the conversation is live.

Connecting and provisioning the WhatsApp number is handled by the Travelgenix team — your agents never touch the setup.

Ratings, receipts, transcripts & translation

Ratings (CSAT)

Visitors can rate a conversation 1–5 stars. A note appears in the thread ("★ Visitor rated this conversation 4/5"), the score shows under **Rating** in Visitor Details, and your overall average appears as **CSAT** in the dashboard stats.

Tip. Watch the CSAT trend rather than any single score. A dip usually follows a knowledge gap — fix it in Luna Brain and the scores recover.

Read receipts

Agent messages show their state: **Sent** (✓), **Delivered** (✓ ✓) and **Read** (✓ ✓ in blue) once the visitor has seen them.

Tip. A blue **Read** with no reply means they've seen your message and are thinking — give them a moment before nudging.

Email transcript

Visitors can be emailed a tidy copy of their chat ("*Your chat transcript*"), sent in your business's name. If they hit reply, it goes straight to your contact email.

Tip. Encourage a transcript when a chat includes quotes, dates or terms — it gives the customer a written record and a one-tap way to reply to you.

Translation

Luna auto-translates both ways: incoming messages into your agents' language, and replies into the visitor's language on send. The **Language** field shows "*(auto-translating)*" when it isn't English.

Tip. Your agents can serve international customers confidently in their own language — just reply in English and Luna handles the rest.

Your go-live checklist

Work through this before you switch your chat on for real customers.

- ☐ **Knowledge added.** Luna Brain has Top knowledge items covering your most common questions (prices, hours, deposit terms, financial protection, popular destinations). Open gaps cleared; suggestions reviewed.
- ☐ **Welcome message & prompt hints set** in Behaviour, reflecting what you sell.
- ☐ **Branding checked** in the Live Preview — name, theme, size and footer look right.
- ☐ **Chat is live on your site** — the bubble appears on your website (your account manager usually sets this up for you).
- ☐ **Escalation tested** — start a test chat, tap **Talk to a human**, confirm it appears as **Waiting**.
- ☐ **Take Over tested** — take over the test chat, reply, confirm it reaches the visitor, then Resolve and check History.
- ☐ **Agents trained** — each can sign in, set presence, read Intel, use Quick Replies and Copilot, and knows when to Take Over.
- ☐ **Quick Replies loaded** across Greetings / Support / Sales / Closing.
- ☐ **One real end-to-end chat run** — ask a genuine question, let Luna answer, escalate, take over, share a file, email the transcript.

Tip. Keep doing this "full loop" test once a week for the first month — it's the fastest way to catch a missing piece of knowledge before a customer does.

You're ready to go live. **Luna Chat** · Powered by Travelgenix
